

Croque-Lune Daycare and Gestionnaire A Long-Term Partnership

Candide Sauvageau
General Manager

Fast and Simple Management Software

Since 1988, Candide Sauvageau has been using a single management software system: Gestionnaire. Gestionnaire is a comprehensive solution which fully meets all her expectations. Ms Sauvageau says that she is as pleased with her software today as she was 24 years ago, and that Gestionnaire ensures problem-free management of the Croque-Lune daycare centre.

Gestionnaire's different modules allow Ms Sauvageau to easily and quickly carry out her daily administration tasks, such as managing children's groups in accordance with her needs.

"The Childcare module is perfect for me. It lets me access child lists based on age, gender, and group. I can categorize them as I choose."

The Finance module lets her perform all her accounting tasks. *"It's very easy to issue cheques, pay accounts, and make deposits. Without this module, bank reconciliation would be an extremely tedious affair."*

With the Human Resources module, Ms Sauvageau is able to efficiently manage her staff. *"This module has everything. Union fee and payroll tasks are as easy as pie."*

Ms Sauvageau especially appreciates that Gestionnaire is integrated management software. She considers it absolutely essential for any daycare centre. *"I never have any problems with the accountants because verification and accounting management information is included in the reports created by Gestionnaire."*

Ms Sauvageau particularly appreciates Gestionnaire's constantly-evolving nature, and concludes by saying that she intends to continue using the software for a long time to come.

About Croque-Lune
